

With its contemporary design, optically-bonded screen and high-res graphics, Delmatic's **touchpanel** delivers the ultimate in touchscreen looks and experience.

Precision-engineered from aluminium and glass, the ultra-cool **touchpanel** appears to float on the wall and can control a single room, a whole apartment or an entire building.

Vibrant, animated graphics provide powerful, intuitive control of lighting and other services as well as comprehensive dashboard and monitoring functions.

The powerful touch device can be used for integrated scene-setting and control within individual rooms or zones as well as to provide graphical management and monitoring of a complete lighting installation.

The 7" TFT touchpanel provides high-resolution 800 x 480 graphics which are fully configurable with custom images, animation and logos, multiple sub-menus, and individual options and preferences. Users can flip instantly between functions, effortlessly controlling lighting, blinds, shades, AV, HVAC functions and room temperature (monitored via the built-in thermostat), and other integrated services.

Unlike other proprietary devices the **touchpanel** adopts standard international ISO communication protocols connecting directly to Dali, Lon and IP networks.

dimensions and mounting

The powerful **touchpanel** has been designed to pack a punch visually and in performance terms, yet to do so while fitting into a standard two-gang back-box.

The bezel dimensions are 202 mm (w) x 160 mm (h) x 12 mm (d) + 3 mm float.
